

ZARKARI Employee Handbook

How the system works, what it is for, and how to use it day to day.

Live site: www.zarkari.co.uk

In-app guided tours: **Admin** → **Training** (/admin/training)

Tip: Open [system-overview.html](#) in your browser for an **animated** version of the diagram above.

1. Purpose of this system

ZARKARI runs on **one platform** with four faces:

Surface	Who uses it	What it is for
Public shop (/)	Customers	Browse collections, buy ready-to-wear online
BOMS admin (/admin)	Owner & staff	Bridal orders, cash, stock, suppliers, cargo, inbox, content
Supplier portal (/supplier)	Dressmakers / ateliers	Accept bridal work and update production stages
My Order (/my-order)	Bridal customers	Track their custom order (order number + WhatsApp phone)

BOMS means Bridal Order Management System. It is the back office that keeps bridal bookings, payments, production, shipping, and the till organised in one place.

Why it exists

- Stop chasing orders on paper, WhatsApp chats, and spreadsheets
- Give suppliers a clear list of work and stages
- Let customers see progress without calling the shop every day
- Keep cash, stock, and supplier accounts (khata) accurate

2. Who uses what (roles)

Staff and suppliers log in at `/login`. Customers do **not** get a staff login — they use My Order.

Role	Can access	Typical work	Limits
Owner	Full <code>/admin</code>	Everything staff can do, plus Users, refunds, deleting records, editing settings	—
Staff	<code>/admin</code> (no Users page)	Create bridal & walk-in sales, cash, stock, cargo, inbox, content, reports	No refunds; cannot hard-delete records; settings usually read-only
Supplier	<code>/supplier</code> only	Accept/reject assigned bridal orders; advance production; upload completion photos	Cannot see other suppliers, cash, or shop finance
Customer	<code>/</code> and <code>/my-order</code>	Shop online; track bridal order	Cannot open admin or supplier areas

3. Login and getting around

1. Go to `/login` and sign in with the email/password your manager gave you.
2. You land in the **admin sidebar** (or bottom menu on phone).
3. Use **Search** in the header for order ID, customer name, or phone.
4. Open **Training** anytime for interactive tours of each screen.
5. On a phone, you can install the admin as an app (install banner, or iPhone: Share → Add to Home Screen).

Main admin menu

Group	Pages
Overview	Dashboard
Orders & stock	Orders, New Order, Stock, Inbox
Finance	Daily Cash, Payments
People	Customers
Suppliers	Suppliers, Cargo & Boxes, Supplier Payments
Storefront	Content (products, collections, homepage, media, blog)

Group	Pages
Planning	Calendar, Reports, Training
System	Notifications, Settings, Users (<i>owner only</i>)

4. Bridal orders (custom dresses)

This is the heart of BOMS.

Typical path (staff)

1. **New Order** (/admin/orders/new) — customer WhatsApp, dress details, deposit, delivery date (~8 weeks), photos/videos.
2. Order is created as **Order Created**.
3. **Send to supplier** when ready — supplier gets it on /supplier .
4. Supplier **Accepts** (or Rejects with a reason).
5. Supplier moves through production stages (fabric → embroidery → stitching → finishing → packing → shipping).
6. When the dress arrives at the shop, staff mark it received / ready for collection.
7. On collection day, take the **balance payment**, add notes if needed, and mark **Collected**.

Status glossary (simplified)

Stage	Meaning
Order Created	Booked in the system
Sent to Supplier	Waiting for atelier to accept
Order Received	Supplier accepted
Fabric / Embroidery / Stitching / Finishing / Packing	In production
Shipping	On the way to the shop
Delivered to Shop	In store
Ready for Collection	Customer can collect
Collected	Finished — balance taken
Cancelled / Refunded	Order stopped (refunds: owner)

Optional: **Redesign in progress** if the customer changes the design after arrival.

Dashboard & Orders list

- **Dashboard** (/admin/dashboard) — active, due this week, overdue, completed.
- **Orders** (/admin/orders) — filter bridal vs online vs walk-in; open a row for full detail.
- From an order page you can message the customer on **WhatsApp** with a green button.

5. Retail sales and stock

Online shop sales

Customer buys on the website → Stripe checkout → order appears under **Orders** (online / shop). Stock comes from **storefront** inventory.

Walk-in (ready-made) sales

Create a walk-in sale from the Orders area. It reduces **storefront** stock and can post cash as a Ready Made Sale.

Stock ([/admin/stock](#))

Two locations:

Location	Meaning
Internal	Warehouse / not on the shop floor yet
Storefront	What the website and walk-in sales sell from

Common actions: **Receive** into internal, **Transfer** internal ↔ storefront, **Adjust** when counting stock.

6. Daily cash and payments

Daily Cash ([/admin/cash](#))

Record money in and out for a day (or browse by date / period). You will see opening balance, cash in, cash out, and closing.

Typical cash in

- Order deposit
- Order collection (balance)
- Ready made sale
- Other income

Typical cash out

- Supplier payment
- Business expenses
- Refund
- Partners / loans
- Other

Use the calendar control to jump to any day. Analytics live at [/admin/cash/analytics](#).

Payments ([/admin/payments](#))

Overview of deposits and balances across orders — useful when chasing outstanding balances.

7. Suppliers, cargo, and khata

Suppliers (/admin/suppliers)

Add supplier details. Owners can create a **login** so the supplier uses /supplier on their phone.

Cargo & Boxes (/admin/cargo)

Track physical shipment boxes from overseas:

1. Add a box (cargo company, tracking, supplier, date).
2. Add line items with PKR/GBP costs; link lines to bridal orders (ORD-...) when relevant.
3. Optionally **Post to khata** so the box total becomes a stock entry on the supplier ledger — or keep cargo-only and update khata later.

Supplier khata (/admin/suppliers/[id]/khata)

The supplier's account book: bills, stock entries, and payments (GBP and PKR, running balance). Related: **Supplier Payments**.

Remember: Cargo = physical boxes. Khata = money/ledger with the supplier.

8. Inbox and notifications

- **Inbox** (/admin/inbox) — customer messages from Facebook, Instagram, WhatsApp, and manual inquiries in one place. Reply from the thread.
 - **Notifications** (bell in the header, and /admin/notifications) — system alerts (new orders, messages, etc.). Mark as read when handled.
-

9. Storefront content

Under **Content** (/admin/content) staff/owners can manage what customers see on the shop:

- Products and collections
- Homepage / hero videos
- Media library (photos & videos)
- Blog posts

Only change live content when instructed — mistakes show on the public website immediately.

10. Customer tracking (My Order)

Tell bridal customers:

1. Go to www.zarkari.co.uk/my-order

2. Enter their **order number** and the **WhatsApp number** used on the booking
3. They can see progress, measurements/design info, and message the shop

They will **not** see internal supplier names or staff-only notes.

11. Calendar, reports, settings, users

Page	Purpose
Calendar	See deliveries and deadlines
Reports	Day / week / month / year summaries; print or save PDF
Settings	Shop/ops settings (owners edit; staff often view only)
Users	Owner-only — create staff and supplier logins

12. FAQ

How do I message a customer on WhatsApp?

Open any order and tap the green **Message on WhatsApp** button. It opens WhatsApp with a pre-filled message.

How do I add a new supplier?

Go to Suppliers → Add Supplier. Fill in their details, then create a login account so they can access `/supplier`.

How do I install the admin on my phone?

Look for the install banner, or on iPhone use Share → Add to Home Screen in Safari.

How do I print a report?

On Reports or Cash Analytics, use **Print / Save PDF** or **Download PDF**.

What is the difference between Cargo & Boxes and supplier khata?

Cargo records physical shipment boxes and contents. Khata is the supplier account ledger. Use **Post to khata** on a box when you want the box total added as a stock entry on that supplier's khata.

Where can I learn more inside the app?

Open **Training** (`/admin/training`) and run a guided tour for the screen you need.

13. Quick reference — important URLs

URL	Purpose
<code>/login</code>	Staff & supplier login
<code>/admin/dashboard</code>	Ops home
<code>/admin/orders</code>	All orders

URL	Purpose
/admin/orders/new	New bridal booking
/admin/cash	Daily till
/admin/stock	Inventory
/admin/cargo	Shipment boxes
/admin/inbox	Social / WhatsApp inbox
/admin/training	Guided learning
/supplier	Supplier portal
/my-order	Customer bridal tracking
/	Public shop

14. How the pieces fit together (summary)

Money stays in **Daily Cash** and **Payments**. Inventory stays in **Stock**. Overseas boxes stay in **Cargo**. Supplier money history stays in **Khata**. Bridal work moves between **Orders**, **Supplier portal**, and **My Order**.

Document for ZARKARI employees. For interactive help inside the system, use Admin → Training.
